

Salomon Quest 4D GTX Forces 2 Walking Boots - Coyote Brown - KHAKI

Product description The Quest 4D GTX Forces 2 EN tactical boots from Salomon will not let you down even in the most demanding terrain. They are very popular, among other things, among members of the security forces, thanks to the fact that durability and comfort are always in the first place. Like hiking boots, but better

These shoes will provide your feet with support similar to classic mountain boots, but unlike classic mountain boots, they will surprise you with their flexibility, thanks to which it is not a problem to move quickly and efficiently even in difficult terrain. The GTX Forces 2 EN model follows on from its predecessor of the same name, which to this day has found many fans even among professionals.

Protection against the vagaries of the weather The new Contagrip MD technology ensures increased durability of the sole. The reinforced sole is also resistant to punctures. At the same time, it does not slip and holds perfectly on both soft and rough surfaces. The sole is designed to withstand extreme and long-term loads without any problems.

Movement without bumps Active Energy Cell technology effectively absorbs shocks. You will appreciate this especially when running in difficult terrain, where the legs really get used. Difficult terrain also carries the risk of small stones, branch fragments and dirt getting into the shoes. A foreign object in the shoe can make the use of the shoe noticeably uncomfortable, which can reduce your concentration in a crisis situation or during a combat deployment.

Foreign objects are not allowed For the above reason, the shoes are supplemented with a layer of fine mesh, which prevents foreign objects from entering the space between the insole and the foot. For the same reasons, the tongue of the shoe is connected to the sides on both sides.

Quality leather and Gore-Tex The shoes are made of high-quality leather, which extends the life of the shoes and increases their durability. The materials used are waterproof, so they completely prevent water from penetrating through the upper part of the shoe. The Gore-Tex membrane, which also ensures the removal of moisture and steam, deserved the maximum protection against moisture.

Non-reflective materials These shoes are mainly intended for tactical use, so they are made of non-reflective materials so that they do not draw attention to themselves (or to you) unnecessarily - both during the day and at night.

Practical design The design of the shoes is based on the requirements for tactical use. The shoe is designed to have a minimum of unevenness and protrusions that could cause it to get caught in ropes, thorns, etc. For these reasons, the shoes are not equipped with classic laces, but with a special tightening system with closed eyelets. The toe of the shoe is protected by a piece of rubber that protects the toe from digging.

Shoes for any situation The shoes are supplemented with very comfortable OrthoLite orthopedic insoles. The shoes have several certifications and can also be used as work shoes. The shoe is puncture-resistant, slip-resistant and anti-static. In short, these are shoes for any terrain and any situation.

Benefits you need to know about:

- durable materials
- waterproof
- antistatic
- puncture resistant sole
- does not slide
- reinforced tip
- protection against
- the intrusion of foreign objects
- effectively wicks away moisture
- practical design
- non-reflective materials
