

# Suunto KB-20 Compasses

**Suunto KB-20 Compasses, Liquid Filled Compass Product Info Suunto KB-20 Compass is a hand-bearing floating compass with a buoyant plastic casing. KB20 Compasses by Suunto are ideal for marine, professional and outdoor use. Suunto KBTwenty Compass has an accuracy that is better than 1 degree and has a reverse scale. It is an ideal instrument for marine, professional and outdoor use. Suunto bearing compasses are designed to combine extreme accuracy with ease and speed of operation. The compasses are water resistant. The cards of these compasses are immersed in a special dampening fluid that ensures vibrationless, smooth movement. They are pivoted on polished sapphire tips. The veering assembly is to all intents and purposes subject to no wear and the liquid remains clear and its viscosity low under all conditions. The Suunto Compass has been given permanent anti-static treatment. The lens apertures of the Suunto KB-14 and KB-20 types are restricted horizontally by a column, which automatically centers the eye on the optical axis, thus eliminating parallax.**
